EAGLE CREEK NURSERY CO., INC.
GROWERS OF *Fine Evergreens*
NEW AUGUSTA, IND.

LINING OUT AND FINISHED STOCK FOR 1949

Nearly twenty years ago we began specializing in the growing of different varieties of Yew. They are now without doubt the most popular evergreen for landscape purposes. They thrive in either sun or shade; they withstand city smoke well; they can be pruned at will; they are practically free from disease and attack by insects.

The Yew comes in a variety of forms, columnar, pyramidal, globe and bushy or spreading types. They are relatively small, slow growing and some varieties are true dwarfs. The foliage is dense, deep green throughout the year, with a smooth, glossy finish. The Yew is an exceedingly long-lived family. We have photographs of Yew hedges which have existed for more than 200 years.

Some of the plants have male and others female flowers. When planted in groups they produce bright red berries which hang on until cold weather. We have experimented with every variety of Yew we could find, discarding the less satisfactory ones and propagating those which showed up the best. The different forms combine to make an interesting and attractive planting.

ONE AND TWO YEAR PLANTS IN POTS

The following plants have been in the cold frames one and two years as indicated, in $2\frac{1}{4}$ " and $2\frac{1}{2}$ " pots, and are in excellent condition.
